### Description

Recycled polyurethane foam footbed

High-performance footbed made of recycled polyurethane foam and covered with polyester, with a multi-perforated structure. It guarantees excellent mechanical resistance, excellent elasticity and shock absorption, offering comfort and protection during use. Equipped with antistatic properties.

Superior comfort: the open-cell structure ensures softness and elasticity, reducing fatigue even after many hours of use;

Shock absorption: cushions loads during walking and more intense movements, protecting joints and the spine;

Anatomical support: the ergonomic profile supports the foot, particularly in the heel and arch areas;

Durability: the material retains its shape and performance longer than traditional insoles.
